

➤ **PROJECT TITLE : OPEN OFFICE CALC**

➤ **SUBMITTED BY:**

- **Name :** Shariq Hassan
- **Class :** Xth (E)
- **Roll No :** 2

➤ **SUBMITTED TO:**

- Ekta mam
- Computer/ IT Teacher.

➤ **SCHOOL NAME :** Sardar Patel Sr. Sec School

➤ **ACADEMIC YEAR :** 2024-2025

INDEX

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to my respected teacher for guiding and supporting me throughout the completion of this project titled **“OpenOffice Calc.”** Their valuable guidance and encouragement helped me understand the topic better and complete the project successfully.

I am also thankful to my school, **Sardar Patel Senior Secondary School**, for providing me with the opportunity and resources to work on this project as part of my Class **10-E** curriculum.

Finally, I would like to thank my parents and friends for their constant support and motivation during this work.

Thank you.

1.) Data Consolidating

Data Consolidation means collecting data from multiple sources and combining it into one single, organized dataset so it can be easily analyzed, reported, or stored.

Why Data Consolidation is Important

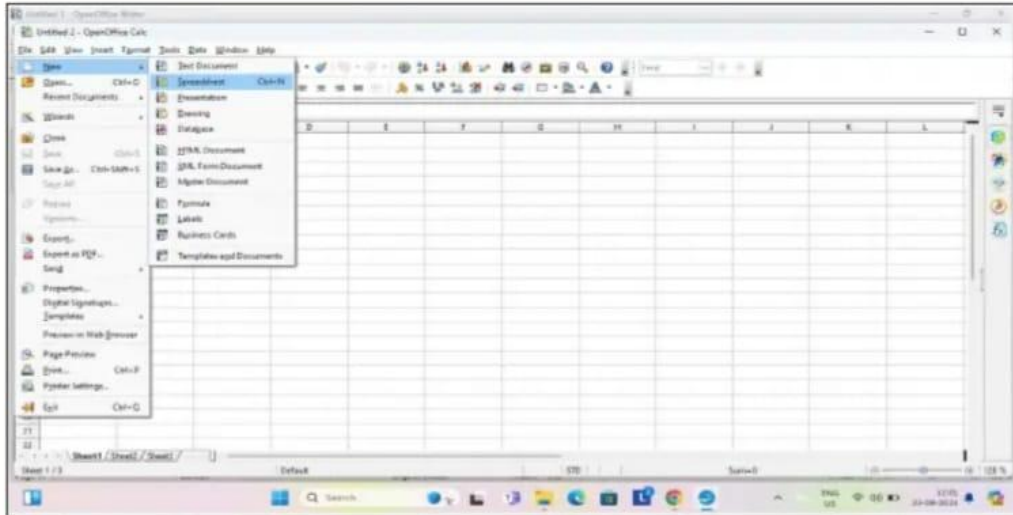

- Reduces **duplicate data**
- Improves **accuracy**
- Saves **time and effort**
- Makes **analysis and decision-making easier**

Common Sources of Data

- Excel files
- Databases
- Different departments (HR, Sales, Finance)
- Multiple systems or applications

OBJECTIVE-To apply data consolidation in spreadsheet using libreoffice calc.

PROCEDURE-Launch libreoffice calc and create new document of spreadsheet .

Step -2-Create 3 sheets that would contain our data.rename them as 2020,2021 and dc respectively

Now after you have your sheets,fill the sales of each car in each year in some particular months as shown below.

	A	B	C	D
1	FIRST QUARTER SALES FOR YEAR 2020			
2	CARS	January	FEBRUARY	March
3	LAMBORGHINI	400	300	405
4	FERRARI	200	250	200
5	TATA	900	700	840
6	FORD	650	530	570

Now for year 2021,

	A	B	C	D
1	FIRST QUARTER SALES FOR YEAR 2021			
2	CARS	January	FEBRUARY	March
3	LAMBORGHINI	430	400	290
4	FERRARI	600	110	330
5	TATA	220	610	890
6	FORD	545	320	400

STEP-3-In dc sheet , fill the row headings and the column headings similar to the prevoius sheets.

After filling the headings , first select the range of cells in which you will consolidate data and go in the data menu and select the option consolidate as shown below.

STEP-4- After receiving the pop up of consolidate , you have to select the consolidation ranges from the two sheets created.

Function
Sum

Consolidation ranges
\$'2020'!\$B\$3:\$D\$6
\$'2021'!\$B\$3:\$D\$6

Source data range
- undefined - \$'2021'!\$B\$3:\$D\$6

Copy results to
- undefined - \$DC.\$B\$3

OK
Cancel
Help
Add
Delete
More

After that select the function you wanna apply and than click ok .

	A	B	C	D
1	FIRST QUARTER SALES OF CARS			
2	CARS	January	FEBRUARY	March
3	LAMBORGHINI	830	700	695
4	FERRARI	800	360	530
5	TATA	1120	1310	1730
6	FORD	1195	850	970

RESULT-We have successfully applied data consolidation in a sheet of calc.

	A	B	C	D
1	FIRST QUARTER SALES OF CARS			
2	CARS	January	FEBRUARY	March
3	LAMBORGHINI	830	700	695
4	FERRARI	800	360	530
5	TATA	1120	1310	1730
6	FORD	1195	850	970

2.) Creating subtotal

Subtotal means calculating totals for groups of data (like sum, average, count) based on a common field.

Steps to Create Subtotal in Excel

Method 1: Using Subtotal Tool (Most Common)

1. **Sort data** by the column you want to group (e.g., *Region*)
2. Select the **entire table**
3. Go to **Data tab** → **Subtotal**
4. In the dialog box:
 - **At each change in:** Region
 - **Use function:** Sum (or Count / Average)
 - **Add subtotal to:** Sales
5. Click **OK**

Excel automatically adds subtotals and an **outline view**.

Functions Available in Subtotal

- Sum
- Count
- Average
- Max
- Min

3.) Creating scenario

Scenario means testing different possible situations by changing input values and seeing how the result changes.

Example

Suppose you want to calculate **profit**:

$$\text{Profit} = \text{Sales} - \text{Cost}$$

You can create scenarios like:

- **Best Case** (high sales, low cost)
- **Normal Case**
- **Worst Case** (low sales, high cost)

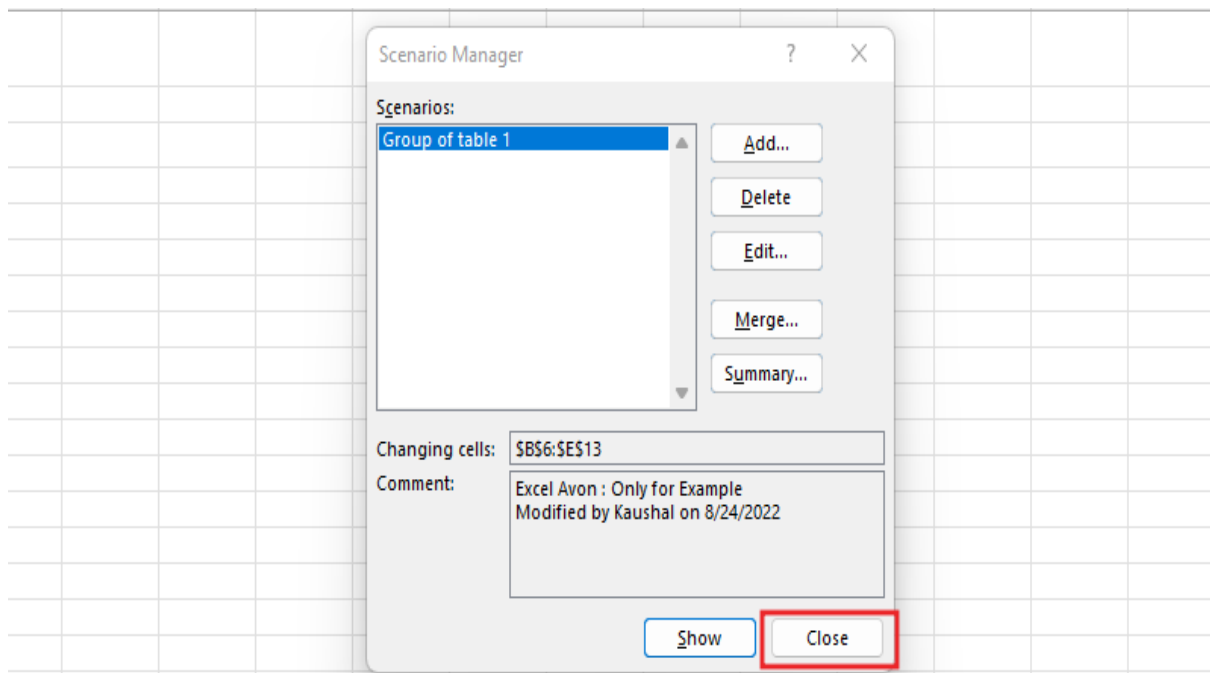

Scenario Summary

1. Open **Scenario Manager**
2. Click **Summary**
3. Choose **Scenario Summary**
4. Excel creates a **new sheet** showing comparison

Steps to Create Scenario in Excel

Using Scenario Manager

1. Enter your **formula** in Excel (e.g., Profit)
2. Go to **Data tab**
3. Click **What-If Analysis → Scenario Manager**
4. Click **Add**
5. Enter:
 - **Scenario name** (e.g., Best Case)
 - **Changing cells** (cells that affect result)
6. Click **OK**
7. Enter values for that scenario
8. Click **Add** to create more scenarios
9. Click **Show** to view any scenario

4.) Macro Calc

A Macro is a recorded or written set of instructions that automates repetitive tasks in Calc.

Example

If you **daily**:

- Format data
- Apply formula
- Calculate total

Steps to Create Macro in Calc

Method: Recording a Macro

1. Open **Calc**
2. Go to **Tools** → **Macros** → **Record Macro**
3. Perform actions you want to automate
(e.g., enter formula, format cells)
4. Click **Stop Recording**
5. Give macro a **name**
6. Save it

Running a Macro

1. Go to **Tools** → **Macros** → **Run Macro**
2. Select the macro
3. Click **Run**

Example Use of Macro

- Auto calculate totals
- Apply formatting
- Generate reports
- Data cleaning

Advantages of Macro

- Saves time
- Reduces errors
- Increases productivity

Disadvantages

- Security risk if macro is unknown
- Needs basic programming knowledge
